TO WHOM IT MAY CONCERN

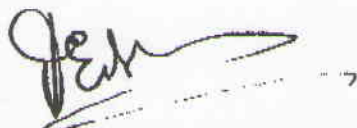

I have been associated with Leak King (Pty) Ltd now for some 15 or more years during which time I have both specified and used their roof sheet fixing system exclusively. The system, used on whatever roof sheet profile or material, has performed admirably with my never having to return to a project to investigate leaks. This statement is supported by the evaluation carried out by the CSIR from which they summarise that the screws performed very satisfactorily under the relatively severe tests they were subjected to.

The system lends itself well to use by developing contractors as the over-driving of fixing screws causing dents around the screw is eliminated. Although somewhat more expensive than the traditional fixings the benefits of a leak free roof far out way the cost.

I can recall an incident recently in Greytown where, when roof sheeting was ripped off during a Tornado, the Leak King fixings, applied in 1986, were the only fixings remaining intact in the roof timbers. This shows there was no leakage around the fixings causing rotting of the timber.

Over the years I have found Leak King one of the few companies I enjoy dealing with. Their response to an order is both friendly and prompt. An overnight delivery from the Reef to Pietermaritzburg is the order of the day.

I shall continue to specify, recommend and use their fixing system as long as it is available.
